1 New Fresh Installation

1.1 New (Clean) Installation (With HW) – Win 7 32/64bit

1. Load the Instructor™ Installation CD into Your PC CD/DVD reader, the Installation Should start automatically. If not, open My Computer, Right Click the CD reader where you have loaded the Sarine Installation CD and click Open. Double click on Setup.exe.

2. Flash window appears –

3. After a few seconds, Opening Setup dialog get display –

4. Read the information and click the Next button to continue –
5. After above steps, a message appears related to Hasp –

6. After reading the message, click the OK button –

7. After Hasp installation has finished, the License Agreement dialog gets displayed –

8. Read the License agreement and, if you agree to it, click the button –
9. Select the programs you want to install and click the button –

10. Select the Setup type and click on the button –
Note: If the Camera.cnfg file is missing from the machine's data, the setup type dialog will be displayed, along with all of the currently supported frame grabber types.

In this case, select the proper frame grabber and click the button –

On Instructor 3.7, the RS232ToUSB driver is auto-installed

11. Click the button and choose the Folder of machine Data from Computer.
Note: The corresponding machine data can be incorporated in **Installation CD under Machine Data Folder** - Installation disk\MachineData

In this case, Installation will not ask for Calibration Data Location and throw the following Dialog Box right after Selection of Setup type –

![Question Dialog Box](image)

By clicking, [Yes] you can continue the Installation. Clicking [No] will cause the Installation to ask again for the Calibration Data Location before Installation proceed onward.

12. In case machine data are for **Basler Machine**, the following message appears –
13. Read the Message, and Click on the OK button –

14. Connect the Cable and Click the OK button –
15. Read the Directions, afterwards Uncheck Both Check Boxes and Click on OK button.

16. You can read more details about the IDS Sleep states Tool, under the Installation Disk (CD) inside uEye (folder), **USB cameras-hot fix**.

17. Select a language (currently only English supported) and Click the Next button –

Notice: Installation of Dot.Net 4.5.2 may cause a restart, due to an issue from Microsoft. Please re-run the installation after the restart or make sure to install the dot.net manually.
18. Select the Windows Display Properties you would like to install and click the button –

19. Click the button in order to change your screen resolution to fit the Instructor™ supports minimal 1280 x 1024 pixels is required.
   Notice it can change desktop icons positioning.

20. NVidia driver should be up to date-

   You may update you Graphic card driver and click "OK"
21. Click the **Finish** button to restart your computer.

22. After Restart, the following Icons appears on the Desktop –

![Icon](image)

**Note:** Clicking on “Instructor™ Training Clips” lead to C:\ProgramData\Sarin Technologies\Instructor\Docs\User Guide Movies, where the folder “Instructor™3.7” Contains Video Tutorials, explaining all steps with Detailed feature description, in Visual manner.
1.2 Station version installation

1. Load the Instructor™ Installation CD into Your PC CD/DVD reader, the Installation Should start automatically. If not, open My Computer, Right Click the CD reader where you have loaded the Sarine Installation CD and click Open. Double click on Setup.exe.

"Right click" on Setup.exe will show you file description as-

Description: Instructor Station Application

2. Flash window appears –

3. Installation for station version will continue similar to above "Fresh new installation" paragraph, Without steps 9-16.

Note: Installation will install the environment for station mode, without HW drivers.
1.3 DiaMension™ Axiom installation

When installing Axiom machine, the user must select the second option – **Hardware: Scanner + Marker**:

![Image of setup type selection]

If the LaserMarking.cnfg file is missing from the Machine Data, this message will appear:

![Image of warning message]

If the user selected the first option or data was missing the LaserMarking.cnfg, the LaserMarking.cnfg would have to be manually merged into the SarinData.cnfg.
1.4 Run as Administrator message

If the system user, which is used for Instructor™3.7 installation, is not an administrator, the next message will be displayed:

![Image of InstallShield Wizard error message]

**Upgrade from Instructor™**

1.5 Upgrade from Instructor™3.5 (Side by Side) Win 7 32/64bit

If Instructor™3.5 is already installed on Win7 32bit OS (or windows 7 64 bit), clicking on Setup.exe from new installation CD (Instructor™3.7) will display the **Setup type** dialog first –

![Image of Setup type dialog]

1. For working *alongside* your previous version, select the first Option –

   ![Install Instructor 3.7 (Side By Side)]

2. Select **Side By Side** Option and click the **Next** button.

3. When you’ll run Side by Side, this message will be displayed, notifying you that the Database will be replaced for Instructor 3.7, while remaining the same for the backed up version –
By clicking, you can continue the Installation. Clicking will cause the Installation to return to the Setup type dialog.

4. **Backup Previous Version** dialog will request the Name for the Backup Version –

5. The Default name will be “Instructor3.5”. If needed change the Name by typing and Click the button.

6. Backup previous version starts –

7. After backup process is complete, the **Component Selection** dialog appears -
8. Select the programs you want to install and click the Next button.
