Quazer™ 4.2/Strategist™ 2.2 Release Notes

New Features / Modification:

**Advisor™ 5.0 support**—Strategist™ 2.2 offers full compatibility with the new Advisor™ 5.0 while benefiting from Advisor’s new features such as saw plane name marking (inscription) and saw plane commenting thus improving the communication between the planners and the laser sawing operators!

Using the new finalize result feature in the Advisor™ 5.0 prevents user operating mistakes under the planning software thus preventing loading errors in Strategist™.

**Note:** Strategist™ 2.2 do not support Pie Groups with more than 2 planes.
**New cassette creation tab** – The process flow was simplified! Some of the functions that were under the cassette management tab were separated to a new tab called cassette creation. Separating the functions insures proper and easy pipeline work flow - starting with cassette creation as the first step and ending with cassette management as a final step.

**Resolved Issues:**

1. **Realign improvements** - several realign improvements performed in the code to achieve better accuracy in the transfer of stones from Strategist™ to the Quazer™.
2. **Exceptions** – exceptions that occurred in some user flows in the Quazer™ that required exiting the Quazer™ application and restarting it were solved.
3. **Verification tab disabled** – cases where the Quazer™ verification tab getting disabled in some user flow were solved.
4. **Start/Resume Job** – specific cases in which the user was unable to resume the job process were fixed.
