Strategist 1.1 New Features Operation

Quick Realign

In order to work in quick realign mode go to the settings → Realign Tab
And set the "one click realign" to True.

![Settings](image)

Once the one click realign will be chosen, the modeling view will be affected as follows:

![Modeling](image)
Show realign results

In order to see the realign results in the information window go to the setting → Realign Tab
And set "Show realign results" to true.

Information window

Pressing the lower line will popup the information window
The information window contain messages of all kinds (errors, warnings and messages)
Pressing the errors and/or warnings and/or messages button will show/hide the relevant type message.
**Popup messages**

In this new version of Strategist there is a new information system which enables the user to customize which messages pop up to the user in the information window. There are 3 types of messages: the error messages, the warning messages, and the information messages. In order to set which type of message will pop up in the information window, go to the settings → information tab and set the "popup on error/warning/message" fields to true.
